The mutual funds shown may have experienced negative performance during one or more of the time periods shown. Call 800-225-6292 or visit amundipioneer.com/us/performance for the most recent performance results.

The Overall Morningstar Ratings™ are based on a weighted average of the star ratings assigned to a fund's three-, five-, and ten-year (as applicable) time periods. The ratings and rankings are for Class Y shares. Not all Pioneer funds are rated 4 or 5 stars.

Please see important additional information on page 5.

Morningstar Analyst Ratings™

April 30, 2019

The Morningstar Analyst Rating™ is a forward-looking assessment of a fund's ability to outperform its peer group and/or relevant benchmark on a risk-adjusted basis over the long term. The Analyst Rating is not a predictor of results, and it is not meant to replace investors' due-diligence process.

Morningstar Sustainability Ratings™

March 31, 2019

Environmental, Social and Governance (ESG) factors are fundamental to the investment decisions made across Amundi Pioneer's family of mutual funds.

The Morningstar Sustainability Rating™ is intended to measure how well the companies of the securities within a fund's portfolio are managing their environmental, social and governance risks and opportunities relative to the fund's Morningstar category peers.

For complete listing of fund ticker symbols, see page 4.

Ratings and rankings are based on past performance, which is no guarantee of future results. Star ratings do not reflect the effect of any applicable sales load. The Morningstar Rating™ for funds, or star rating, is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Rankings are based on average annual total returns for listed periods and do not reflect any applicable sales load.

Morningstar Ratings and rankings are for Y share class, as indicated; other classes may have different performance characteristics.

Important Information

The Morningstar Analyst Rating (i) should not be used as the sole basis in evaluating a fund, (ii) involves unknown risks and uncertainties which may cause Analyst expectations not to occur or to differ significantly from what they expected, and (iii) should not be considered an offer or solicitation to buy or sell the fund.

The Morningstar Analyst Rating™ is not a credit or risk rating. It is a subjective evaluation performed by Morningstar's manager research group, which consists of various Morningstar, Inc. subsidiaries ("Manager Research Group"). In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission. The Manager Research Group evaluates funds based on five key pillars, which are process, performance, people, parent, and price. The Manager Research Group uses this five pillar evaluation to determine how they believe funds are likely to perform relative to a benchmark, or in the case of exchange-traded funds and index mutual funds, a relevant peer group, over the long term on a risk-adjusted basis. They consider quantitative and qualitative factors in their research, and the weight of each pillar may vary. The Analyst Rating scale is Gold, Silver, Bronze, Neutral, and Negative. A Morningstar Analyst Rating of Gold, Silver, or Bronze reflects the Manager Research Group's conviction in a fund's prospects for outperformance. Analyst Ratings ultimately reflect the Manager Research Group's overall assessment, are overseen by an Analyst Rating Committee, and are continuously monitored and reevaluated at least every 14 months. For more detailed information about Morningstar's Analyst Rating, including its methodology, please go to global.morningstar.com/managerdisclosures/.

Morningstar Sustainability Ratings™ and Scores™

Sustainability Scores and Ratings as of March 31, 2019. Sustainability provides company-level analysis used in the calculation of Morningstar's Sustainability Score. The Morningstar® Sustainability Rating is intended to measure how well the issuing companies of the securities within a fund's portfolio are managing their environmental, social, and governance ("ESG") risks and opportunities relative to the fund's Morningstar category peers. The Morningstar Sustainability Rating calculation is a two-step process. First, each fund with at least 50% of assets covered by a company-level ESG score from Sustainability¹ receives a Morningstar® Portfolio Sustainability Score™. The Morningstar Portfolio Sustainability Score is an asset-weighted average of normalized company-level ESG scores with deductions made for controversial incidents by the issuing companies, such as environmental accidents, fraud, or discriminatory behavior.

The Morningstar Sustainability Rating is then assigned to all scored funds within Morningstar Categories in which at least ten (10) funds receive a Portfolio Sustainability Score and is determined by each fund's rank within the following distribution:

- High (highest 10%) • Above Average (next 22.5%) • Average (next 35%) • Below Average (next 22.5%) and • Low (lowest 10%)

The Morningstar Sustainability Rating is depicted by globe icons where High equals 5 globes and Low equals 1 globe. A Sustainability Rating is assigned to any fund that has more than half of its underlying assets rated by Sustainability and is within a Morningstar Category with at least 10 scored funds; therefore, the rating it is not limited to funds with explicit sustainable or responsible investment mandates. Morningstar updates its Sustainability Ratings monthly. Portfolios receive a Morningstar Portfolio Sustainability Score and Sustainability Rating one month and six business days after their reported as-of date based on the most recent portfolio. As part of the evaluation process, Morningstar uses Sustainability's ESG scores from the same month as the portfolio as-of date.

Please click on <http://corporate1.morningstar.com/SustainableInvesting> for more detailed information about the Morningstar Sustainability Rating and its calculation.

¹Sustainability is an independent ESG and corporate governance research, ratings, and analysis firm and is not an affiliated company of Morningstar, Inc.

1. A portion of income may be subject to local, state, federal, and/or alternative minimum tax. Capital gains, if any, are subject to a capital gains tax. **2.** At times, the Fund's investments may represent industries or industry sectors that are interrelated or have common risks, making it more susceptible to any economic, political, or regulatory developments or other risks affecting those industries and sectors. **3.** Investing in foreign and/or emerging markets securities involves risks relating to interest rates, currency exchange rates, economic, and political conditions. **4.** Investments in high yield or lower rated securities are subject to greater-than-average price volatility, illiquidity and possibility of default. **5.** When interest rates rise, the prices of fixed income securities in the fund will generally fall. Conversely, when interest rates fall, the prices of fixed income securities in the Fund will generally rise. **6.** The portfolio may invest in mortgage-backed securities, which during times of fluctuating interest rates may increase or decrease more than other fixed-income securities. Mortgage-Backed securities are also subject to pre-payments. **7.** Investments in small companies may offer the potential for higher returns, but are also subject to greater short-term price fluctuations than larger, more established companies. **8.** Investments in the fund are subject to possible loss due to the financial failure of issuers of underlying securities and their inability to meet their debt obligations. **9.** Prepayment risk is the chance that an issuer may exercise its right to prepay its security, if falling interest rates prompt the issuer to do so. Forced to reinvest the unanticipated proceeds at lower interest rates, the fund would experience a decline in income and lose the opportunity for additional price appreciation. **10.** The securities issued by U.S. Government sponsored entities (i.e., FNMA, Freddie Mac) are neither guaranteed nor issued by the U.S. Government. **11.** The portfolio invests in REIT securities, the value of which can fall for a variety of reasons, such as declines in rental income, fluctuating interest rates, poor property management, environmental liabilities, uninsured damage, increased competition, or changes in real estate tax laws. **12.** The Fund may invest in fewer than 40 securities and, as a result, the fund's performance may be more volatile than the performance of other funds holding more securities. **13.** Investing in mid-sized companies may offer the potential for higher returns, but are also subject to greater short-term price fluctuations than larger, more established companies. **14.** The value of municipal securities can be adversely affected by changes in financial condition of municipal issuers, lower revenues, and regulatory and political developments. **15.** These risks may increase share price volatility. **16.** The Fund is subject to currency risk, meaning that the Fund could experience losses based on changes in the exchange rate between non-U.S. currencies and the U.S. dollar. **17.** The Fund may use derivatives, such as options, futures, inverse floating rate obligations, swaps, and others, which can be illiquid, may disproportionately increase losses, and have a potentially large impact on Fund performance. Derivatives may have a leveraging effect on the Fund. **18.** Floating rate loans and similar instruments may be illiquid or less liquid than other instruments, and the value of any collateral can decline or be insufficient to meet the issuer's obligations. **19.** To the extent the Fund invests in issues located within specific countries or regions, the Fund may be particularly affected by adverse markets, rates, and events, which may occur in those countries and regions. **20.** The Fund generally excludes corporate issuers that do not meet or exceed minimum ESG standards. Excluding specific issuers limits the universe of investments available to the Fund, which may mean forgoing some investment opportunities available to funds without similar ESG standards.

In Addition

Pioneer Floating Rate Fund

Debt securities rated below-investment grade are commonly referred to as "junk bonds" and are considered speculative. Below-investment grade debt securities involve greater risk of loss, are subject to greater price volatility and are less liquid, especially during periods of economic uncertainty or change, than higher rated debt securities. Securities with floating interest rates generally are less sensitive to interest rate changes but may decline in value if their interest rates do not rise as much, or as quickly, as prevailing interest rates. Unlike fixed rate securities, floating rate securities generally will not increase in value if interest rates decline. Changes in interest rates also will affect the amount of interest income the Fund earns on its floating rate investments. Investing in foreign and/or emerging markets securities involves risks relating to interest rates, currency exchange rates, economic and political conditions. These risks may increase share price volatility.

Pioneer Flexible Opportunities Fund

All investments are subject to risk, including the possible loss of principal. Pioneer Flexible Opportunities Fund has the ability to invest in a wide variety of securities and asset classes. **The Fund may invest in underlying funds** (ETFs and unit investment trusts). In addition to the Fund's operating expenses, you will indirectly bear the operating expenses of investments in any underlying funds. **The Fund and some of the underlying funds employ leverage**, which increases the volatility of investment returns and subjects the Fund to magnified losses if an underlying fund's investments decline in value. The Fund and some of the underlying funds may use derivatives, such as options and futures, which can be illiquid, may disproportionately increase losses and have a potentially large impact on Fund performance. **The Fund and some of the underlying funds may employ short selling**, a speculative strategy. Unlike the possible loss on a security that is purchased, there is no limit on the amount of loss on an appreciating security that is sold short. **The Fund may invest in inflation-linked securities**. As inflationary expectations increase, inflation-linked securities may become more attractive, because they protect future interest payments against inflation. Conversely, as inflationary concerns decrease, inflation-linked securities will become less attractive and less valuable. **The Fund may invest in credit default swaps**, which may in some cases be illiquid, and they increase credit risk since the Fund has exposure to both the issuer of the referenced obligation and the counterparty to the credit default swap. **The Fund may invest in subordinated securities**, which may be disproportionately adversely affected by a default or even a perceived decline in creditworthiness of the issuer. **The Fund may invest in floating rate loans**. The value of collateral, if any, securing a floating rate loan can decline or may be insufficient to meet the issuer's obligations or may be difficult to liquidate. **The Fund may invest in event-linked bonds**. The return of principal and the payment of interest on event-linked bonds are contingent on the non-occurrence of a predefined "trigger" event, such as a hurricane or an earthquake of a specific magnitude. **The Fund may invest in securities that provide exposure to commodities**. The value of commodity-linked derivatives may be affected by changes in overall market movements, commodity index volatility, changes in interest rates, factors affecting a particular industry or commodity, international economic, political and regulatory developments, supply and demand and governmental regulatory policies. **Investments in equity securities are subject to price fluctuation. Small-and mid-cap stocks involve greater risks and volatility than large-cap stocks**. International investments are subject to special risks including currency fluctuations, social, economic and political uncertainties, which could increase volatility. These risks are magnified in emerging markets. **Investments in fixed income securities involve interest rate, credit, inflation and reinvestment risks**. As interest rates rise, the value of fixed income securities falls. The Fund may invest in mortgage-backed securities, which during times of fluctuating interest rates may increase or decrease more than other fixed income securities. Mortgage-backed securities are also subject to prepayments. **Prepayment risk is the chance that mortgage-backed bonds will be paid off early** if falling interest rates prompt homeowners to refinance their mortgages. **High yield bonds possess greater price volatility, illiquidity and possibility of default. Please see the prospectus for a more complete discussion of the Fund's risks**. These risks may increase share price volatility. There is no assurance that these and other strategies used by the Fund or underlying funds will be successful. **Please see the prospectus for a more complete discussion of the Fund's risks**.

Pioneer Solutions - Balanced Fund

Pioneer Solutions - Balanced Fund is a “fund-of-funds” which seeks to achieve its investment objectives by primarily investing in mainly funds managed by Amundi Pioneer or one of its affiliates, rather than direct position in securities. The Fund’s performance depends on the adviser’s skill in determining the strategic asset allocations, the mix of underlying funds, as well as the performance of those underlying funds. The underlying funds’ performance may be lower than the performance of the asset class that they were selected to represent. In addition to the Fund’s operating expenses, investors will indirectly bear the operating expenses of investments in any underlying funds. Each of the underlying funds has its own investment risks. At times, **the Fund’s investments may represent industries or sectors that are interrelated or have common risks**, making them more susceptible to any economic, political, or regulatory developments or other risks affecting those industries and sectors. **Investments in equity securities** are subject to price fluctuation. **When interest rates rise, the prices of fixed income securities in the Fund will generally fall.** Conversely, when interest rates fall, the prices of fixed income securities in the Fund will generally rise. **Investments in the Fund are subject to possible loss** due to the financial failure of issuers of underlying securities and their inability to meet their debt obligations. **Investing in foreign and/or emerging markets securities** involves risks relating to interest rates, currency exchange rates, economic, and political conditions. **The portfolios invests in REIT securities**, the value of which can fall for a variety of reasons, such as declines in rental income, fluctuating interest rates, poor property management, environmental liabilities, uninsured damage, increased competition, or changes in real estate tax laws. **The Fund may invest in underlying funds with exposure to commodities.** The value of commodity-linked derivatives may be affected by changes in overall market movements, commodity index volatility, changes in interest rates, factors affecting a particular industry or commodity, international economic, political and regulatory developments, supply and demand, and governmental regulatory policies. **The Fund may use derivatives**, such as options, futures, inverse floating rate obligations, swaps, and others, which can be illiquid, may disproportionately increase losses, and have a potentially large impact on fund performance. Derivatives may have a leveraging effect on the Fund. **The Fund may invest in credit default swaps**, which may in some cases be illiquid, and they increase credit risk since the fund has exposure to both the issuer of the referenced obligation and the counterparty to the credit default swap. **The Fund and some of the underlying funds employ leverage**, which increases the volatility of investment returns and subjects the Funds to magnified losses if an underlying fund’s investments decline in value. **The Fund and some of the underlying funds may employ short selling**, a speculative strategy. Unlike the possible loss on a security that is purchased, there is no limit on the amount of loss on an appreciating security that is sold short. **The value of the investments held by the Fund for cash management** or temporary defensive purposes may be affected by market risks, changing interest rates, and by changes in credit ratings of the investments. If the Fund holds cash uninvested, the Fund will not earn income on the cash and the Fund’s yield will go down. These risks may increase share price volatility. **There is no assurance that these and other strategies used by the Fund will be successful. Please see the prospectus for a more complete discussion of the Fund’s risks.**

Pioneer Multi-Asset Income Fund 1,2,3,4,5,6,7,8,9,11,12,13,14,15,20,21,22,23

Pioneer Multi-Asset Ultrashort Income Fund 1,2,3,4,5,6,15,7,8,9,10,20,11,12,13,14,16,17,18,19

1. All investments are subject to risk, including the possible loss of principal. The Fund has the ability to invest in a wide variety of debt securities. **2.** The Fund may invest in underlying funds, including ETF’s. In addition to the Fund’s operating expenses, you will indirectly bear the operating expenses of investments in any underlying funds. **3.** The Fund and some of the underlying funds employ leverage, which increases the volatility of investment returns and subjects the Fund to magnified losses if an underlying fund’s investments decline in value. **4.** The Fund and some of the underlying funds may use derivatives, such as options and futures, which can be illiquid, may disproportionately increase losses, and have a potentially large impact on Fund performance. **5.** The Fund may invest in inflation-linked securities. As inflationary expectations increase, inflation linked securities may become more attractive, because they protect future interest payments against inflation. Conversely, as inflationary concerns decrease, inflation-linked securities will become less attractive and less valuable. **6.** The Fund may invest in credit default swaps, which may in some cases be illiquid, and they increase credit risk since the fund has exposure to both the issuer of the referenced obligation and the counterparty to the credit default swap. **7.** The Fund may invest in floating rate loans. The value of collateral, if any, securing a floating rate loan can decline or may be insufficient to meet the issuer’s obligations or may be difficult to liquidate. **8.** The Fund may invest in event-linked bonds. The return of principal and the payment of interest on event-linked bonds are contingent on the nonoccurrence of a predefined “trigger” event, such as a hurricane or an earthquake of a specific magnitude. **9.** The Fund may invest in zero coupon bonds and payment in kind securities, which may be more speculative and fluctuate more in value than other fixed income securities. The accrual of income from these securities are payable as taxable annual dividends to shareholders. **10.** Investments in equity securities are subject to price fluctuation. **11.** Investments in fixed income securities involve interest rate, credit, inflation, and reinvestment risks. As interest rates rise, the value of fixed income securities falls. **12.** The Fund may invest in mortgage-backed securities, which during times of fluctuating interest rates may increase or decrease more than other fixed-income securities. Mortgage-backed securities are also subject to pre-payments. **13.** Prepayment risk is the chance that an issuer may exercise its right to prepay its security, if falling interest rates prompt the issuer to do so. Forced to reinvest the unanticipated proceeds at lower interest rates, the Fund would experience a decline in income and lose the opportunity for additional price appreciation. **14.** High yield bonds possess greater price volatility, illiquidity, and possibility of default. **15.** The Fund may invest in subordinated securities which may be disproportionately adversely affected by a default or even a perceived decline in creditworthiness of the issuer. **16.** There may be insufficient or illiquid collateral securing the floating rate loans held within the Fund. This may reduce the future redemption or recovery value of such loans. **17.** The Fund may have disadvantaged access to confidential information that could be used to assess a loan issuer, as Pioneer normally seeks to avoid receiving material, non-public information. **18.** Multi-Asset Ultrashort Income Fund is not a money market fund. **19.** There is no assurance that these and other strategies used by the Fund or underlying funds will be successful. **20.** International investments are subject to special risks including currency fluctuations, social, economic and political uncertainties, which could increase volatility. These risks are magnified in emerging markets. **21.** Small-and mid-cap stocks involve greater risks and volatility than large-cap stocks. **22.** Investments in equity securities are subject to price fluctuation. **23.** The Fund may invest in Master Limited Partnerships, which are subject to increased risks of liquidity, price valuation, control, voting rights and taxation. In addition, the structure affords fewer protections to investors in the Partnership than direct investors in a corporation.

These risks may increase share price volatility.

Please see the prospectus for a more complete discussion of the Fund’s risks.
